Siding for life

www.lynxsiding.com

Designed with flexibility and simplicity in mind.

LYNX facade panels are an innovative and timeless form of cladding for facades and soffits and also impress with their ease of care and weather resistance.

All profiles are 12 foot long, made of a high-quality aluminum alloy coated with a high-performance woodgrain film. We created beautiful siding planks that defy wind, cold and any weather for modern and high sustainable facades.

The installation is done by the special stainless steel screw and the associated trim profiles. The special tongue and groove connection always results in a V joint of 1/6 inch.

Elegant & Edgy

Lynx Siding Profiles

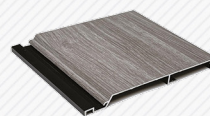

Royal Oak

Alpine Ash

American Walnut

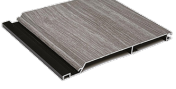

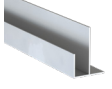

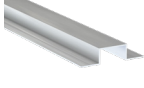

Silver Beech
