Aluminum facades look & feel like wood

Beautiful facades - for a lifetime

Facade Profile

Click Profile

LYNX Facade made of 15 cm Facade Panels, Royal Oak

LYNX Designs

Lynx Designs presents aluminum building materials as the perfect alternative for those who appreciate the natural look of wooden facades but want to benefit from the advantages of aluminum.

Popular among architects and builders

In recent years, more and more have chosen this type of facade cladding. The reason? They're looking for materials that offer not just the natural look of wooden facades but are also low maintenance, fireproof, eco-friendly, and sustainable. The LYNX wood-look aluminum facade has emerged as a particularly attractive option.

Unsurpassed Durability

A standout feature of the wood-look aluminum facade is its impressive durability. Unlike traditional wooden facades that can rot, splinter, or

An outstanding feature of the wood-look aluminum facade is its impressive durability.

LYNX Fassade made of 15 cm Click Profiles, Ruby Pine

crack, an aluminum facade is extremely resistant. It withstands pests and also offers fireproof protection, adding an extra layer of safety for buildings.

Maintenance Ease and Environmental Awareness

While wooden facades require regular care, our wood-look aluminum facades need minimal effort. No painting, no sealing – just simple cleaning with soap and water. And in terms of eco-friendliness, they are on par with traditional wooden facades. In fact, aluminum is 100% recyclable, leading to significantly less environmental impact. Additionally, the longevity of an aluminum facade reduces the need for replacement materials, as well as care and cleaning products.

LYNX room divider, Indoor, made from various Click Profiles.

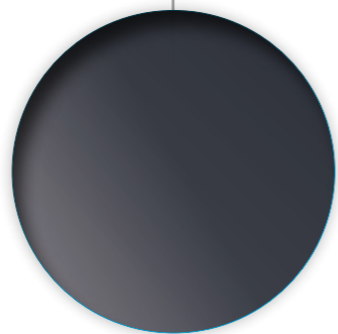

Six selected colors have so far been featured throughout the entire Lynx system. All profiles can be combined with each other.

Alpine Ash

American Walnut

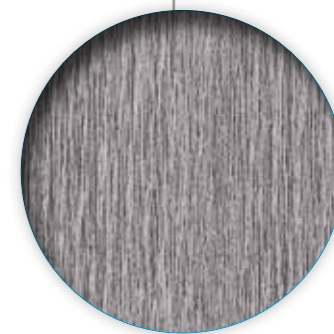

Anthracite

Royal Oak

Ruby Pine

Silver Beech

There are six different decors, five of which are in deceptively real wood reproduction. They remain beautifully enduring, just like on the first day.

LYNX Farben

Our aluminum profiles get their distinctive, unmistakable appearance from the LYNX special foils. No matter what style you design your house in, our colors are appropriately coordinated.

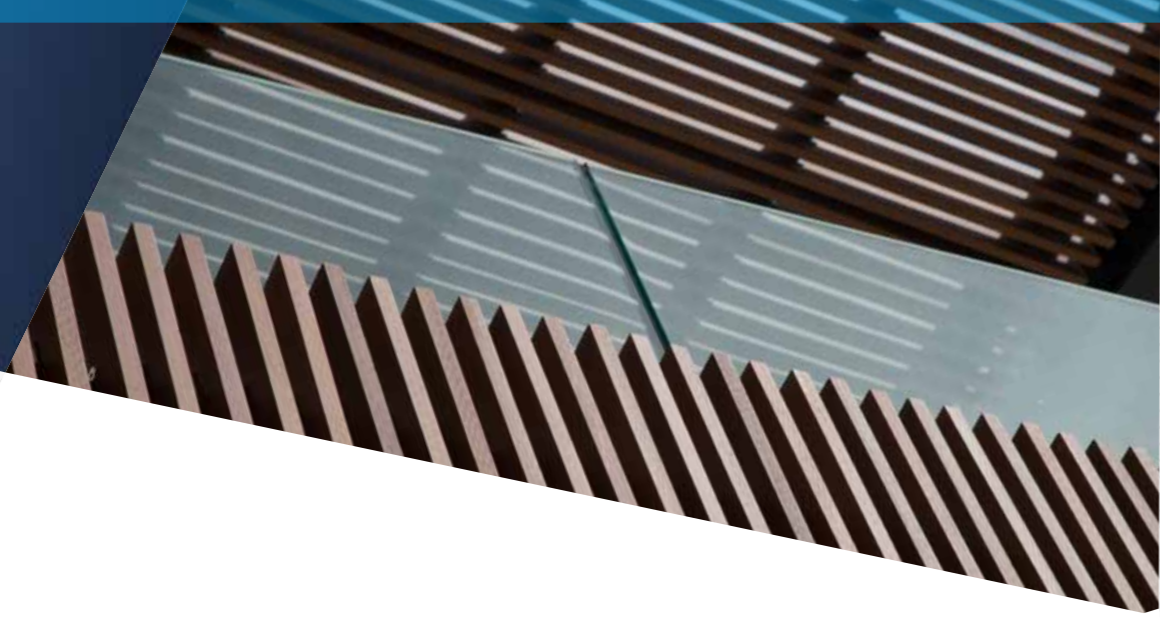

You have a choice between six different decors. A UV protection film ensures color fastness even after many years of intense sunlight, giving your facade a unique appearance.

Elegant Look and Feel

The high flexibility of our foils prevents shrinking and associated cracking. Thanks to the deep embossing of the surface, our panels also tactically convey the impression of wood. This is what makes our products so attractive for use in interior spaces.

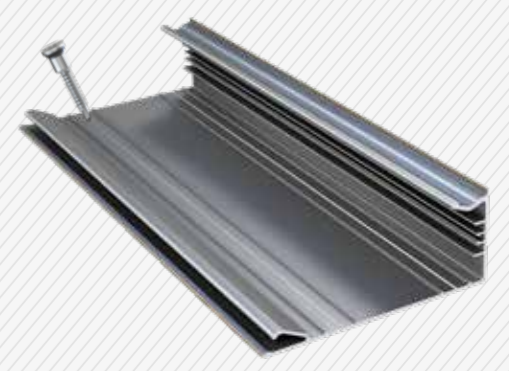

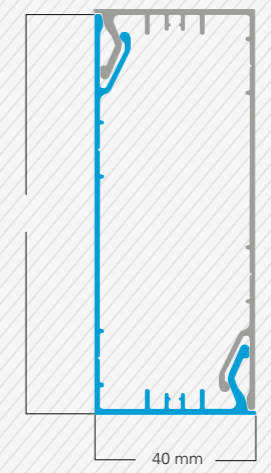

You can also try out our LYNX color selector at www.lynx-designs.com/color1

The LYNX Click Profile System

consists of two precisely manufactured, mirror-like aluminum shells. The first half is screwed directly to the substructure at the designated grooves (optionally on the wide or narrow sides). Then, the second shell is simply mounted with a „click“, creating a perfect aluminum square channel. Whether it remains empty or is used as an installation channel for electricity, water, or other supply lines is left to your imagination.

LYNX Screen Walls

The appearance of a building is defined by its facade. With the different cross-sections of our Click Profiles, it is possible to set creative accents through their combination, creating an exciting interplay of light and shadow. Large areas acquire a lively surface. Through partial installation, parts of the building structure or facade interact with each other in a dynamic way. Exceptional building materials for extraordinary structures.

There are virtually no limits to creativity in facade design.

LYNX Substructure

IMPORTANT – Five Points You Must Consider for a LYNX Facade Installation:

1. Substructure and trims may have to be installed beforehand.
2. Placement of the screw.
3. Room for expansion and contraction.
4. Firm snapping in of each individual panel.
5. Ventilation from top to bottom.

NOTE:

Thorough pre-planning including the right choice of materials is essential. Carefully read the instructions for LYNX facade installation and obtain all necessary building permits before starting the installation. Determine the cutting options before starting the project to ensure that the details of the LYNX facade installation are consistent for all sides of the building. The installation is the sole responsibility of the installer. LYNX assumes no responsibility in regard to the installation. The information contained herein is for orientation purposes only and should not be taken as an absolute representation of LYNX.
